

Balance at Hand: Disposal of dispensers

Katrin Dispensers are designed to have long life span. Due to the design, extensive maintenance and spare parts system, one dispenser can perform very well for tens of years.

- Katrin Dispensers made of pure ABS plastic (Acrylonitrile-Butadiene-Styrene) can be recycled together with regular plastic waste but also as energy waste
- Katrin stainless steel dispensers can be recycled along with other recyclable stainless steel waste
- Katrin white metal dispensers can be recycled like all painted mild steel waste

Our partners and suppliers producing dispensers, have shown excellent proven effort in responsibility issues.
