Easy Flush

Katrin. At Hand.

Easyflush Solving even those tricky challenges...

Some tissue needs are especially challenging...

Toilet systems whose operation is based on negative Pressure are used on aeroplanes, trains, and ships, but they are sensitive to malfunctions.

Poorly dissolving paper can cause blockages anywhere throughout the narrow systems and can also get caught on the urine scale which is deposited on the pipes.

Improper use is often the reason for a blocked drain. Hand towels into the toilet bowl or sink can easily block a vacuum toilet or a sensitive wastewater piping system. And "young minds" have often felt the need to conduct experiments by dumping tissue down often very old drainage systems just for fun!

Drain systems in old parts of cities as well as water-saving toilet bowls in newly constructed buildings increase the risk of blockages, and often, blockages are difficult to find if they are outside a communal infrastructure.

Increasing use of recycled material, containing large amounts of binding glue, also presents issues with these types of products dissolving considerably more slowly than pure virgin fibre products.

Any type of blockage is a hygiene risk. And usually these drainage issues occur in environment where large numbers of people pass through – transport systems, schools, offices etc. This represents ideal bacteria breeding conditions, resulting in the spread of infections and an enormous impact on sick time.

Easy solutions for special conditions

In contrast to conventional products, Katrin EasyFlush® tissue paper is completely water soluble without impacting product functionality.

The Katrin EasyFlush range begins to disintegrate, sooner, faster and into much finer particles than other tissue papers, greatly reducing the risk of blockages in all of the problem areas outlined.

Cost savings are created through a reduction in expensive resource/maintenance costs and user satisfaction/brand value is retained much more effectively.

The EasyFlush tissue products are also the right size to fit in the integrated toilet facilities with fixed dispensers that can be found on most public transport vehicles.

It is also important to know that Katrin Plus grade products are also made with pure, top quality virgin fibres which are longer so they naturally bond together, which means we use less glue in the paper making process. It is the glue used to bind fibres together which makes other products (and especially recycled products) harder to break down and so more liable to cause blockages.
